GENERAL NOTES

The roadway plans have been designed utilizing the 2012 Construction Standard Drawings (C-Series) and current revisions. Refer to the 1A sheet for a listing of current revision dates.

The project roadway shall be striped by the contractor in accordance with the current edition of the Signing and Marking Standard Drawings (M&S-Series) and the pavement marking plans.

Pavement lift thickness is nominal.

Where only the horizontal location of an existing utility is shown, the location is approximate. Where both the horizontal and vertical location of an existing utility is shown, the location has been verified by field survey methods. The contractor shall comply with all current Blue Stake laws and Section 107.15 of the Specifications.

Delineators, object markers and mile post markers shall be removed and reset as required.

The average project elevation is 5460'.

Slope rounding shall be applied per Std C-02 series unless otherwise noted.

The pavement shoulders shall be treated with a rumble strip: see Traffic sheets.

PAVEMENT MARKING NOTES:

- Final striping shall be a 25 mil dual component epoxy placed at a minimum of 30 calendar days after the initial striping. The two-part material shall conform to the requirements of the Special Provisions.
- At the completion of the final pavement surface each day, center lines, lane lines, edge lines and stop bars shall be striped with one application of standard reflectorized traffic paint at the locations of the permanent striping. The paint shall have a maximum thickness of 15 mils wet.
- All reflective recessed pavement markers shall be installed so that the reflective face of each marker is facing the direction of traffic and is perpendicular to the direction of traffic flow.
- All reflective recessed pavement markers shall have an abrasion-resistant coating on the face of the prismatic reflector and shall conform to details M-18 or M-19 of the ADOT Standard Drawings. They shall be installed with a bituminous adhesive which is on the ADOT Approved Product List.
- The contractor shall install ground-in rumble strips along edge lines as shown in the plans. The ground-in rumble strips shall conform to ADOT Standard Drawing M-22.
- The Contractor shall clean the roadway surface to the satisfaction of the Engineer, by sweeping and air-jet blowing, immediately prior to the placement of all epoxy pavement markings. The roadway surface shall be dry. The pavement temperature shall not be less than 40 degrees F and the air temperature/wind chill factor shall not be less than 35 degrees F for the placement of epoxy pavement markings.
- All final stop bars shall be dual component pavement markings (transverse).
- It is the Contractor's responsibility to ensure that the final surface course is placed so that the striping is offset one foot clear of any construction joint, unless otherwise directed by the Engineer.
- The Contractor shall be responsible for the layout and installation of permanent pavement markings on the final surface course following control points that have been set no more than 50 feet apart along the lines to be striped.
- When stripe obliteration is necessary, it shall be accomplished by an approved method. Painting over striping, removal of pavement, and overlaying pavement do not constitute stripe obliteration.
- The Contractor shall preserve all roadway signs, sign supports, object markers and milestone markers non indicated for removal or replacement on the plans. The Contractor shall replace any signs, sign supports or markers damaged as a result of the construction at the Contractor's expense.
- The Contractor shall remove existing delineators and install new flexible white delineators within the limits of the curve construction. All delineators shall conform to ADOT Standard Drawing M-26 and as directed by the Engineer. All flexible delineators shall be on ADOT's Approved Products List. Delineators shall be installed no closer than 4 feet and no further than 8 feet from the new edge of pavement for fill sections. Offset on cut section may require to be less than 4 feet depending on field condition. Offset distances shall be approved by the Engineer.
- The Contractor shall notify the Engineer two weeks prior to the application of any pavement markings to schedule a "NO PASSING ZONE" survey by State forces. The "NO PASSING ZONE" survey shall supersede the permanent pavement marking plans. State "NO PASSING ZONE" crew phone number is: (602) 228-2508, (602) 228-0889 or (602) 228-4932.
- The pavement marking drawings are schematic only and not to scale. The contractor shall follow all dimensions and details when installing pavement markings.

SIGNING NOTES:

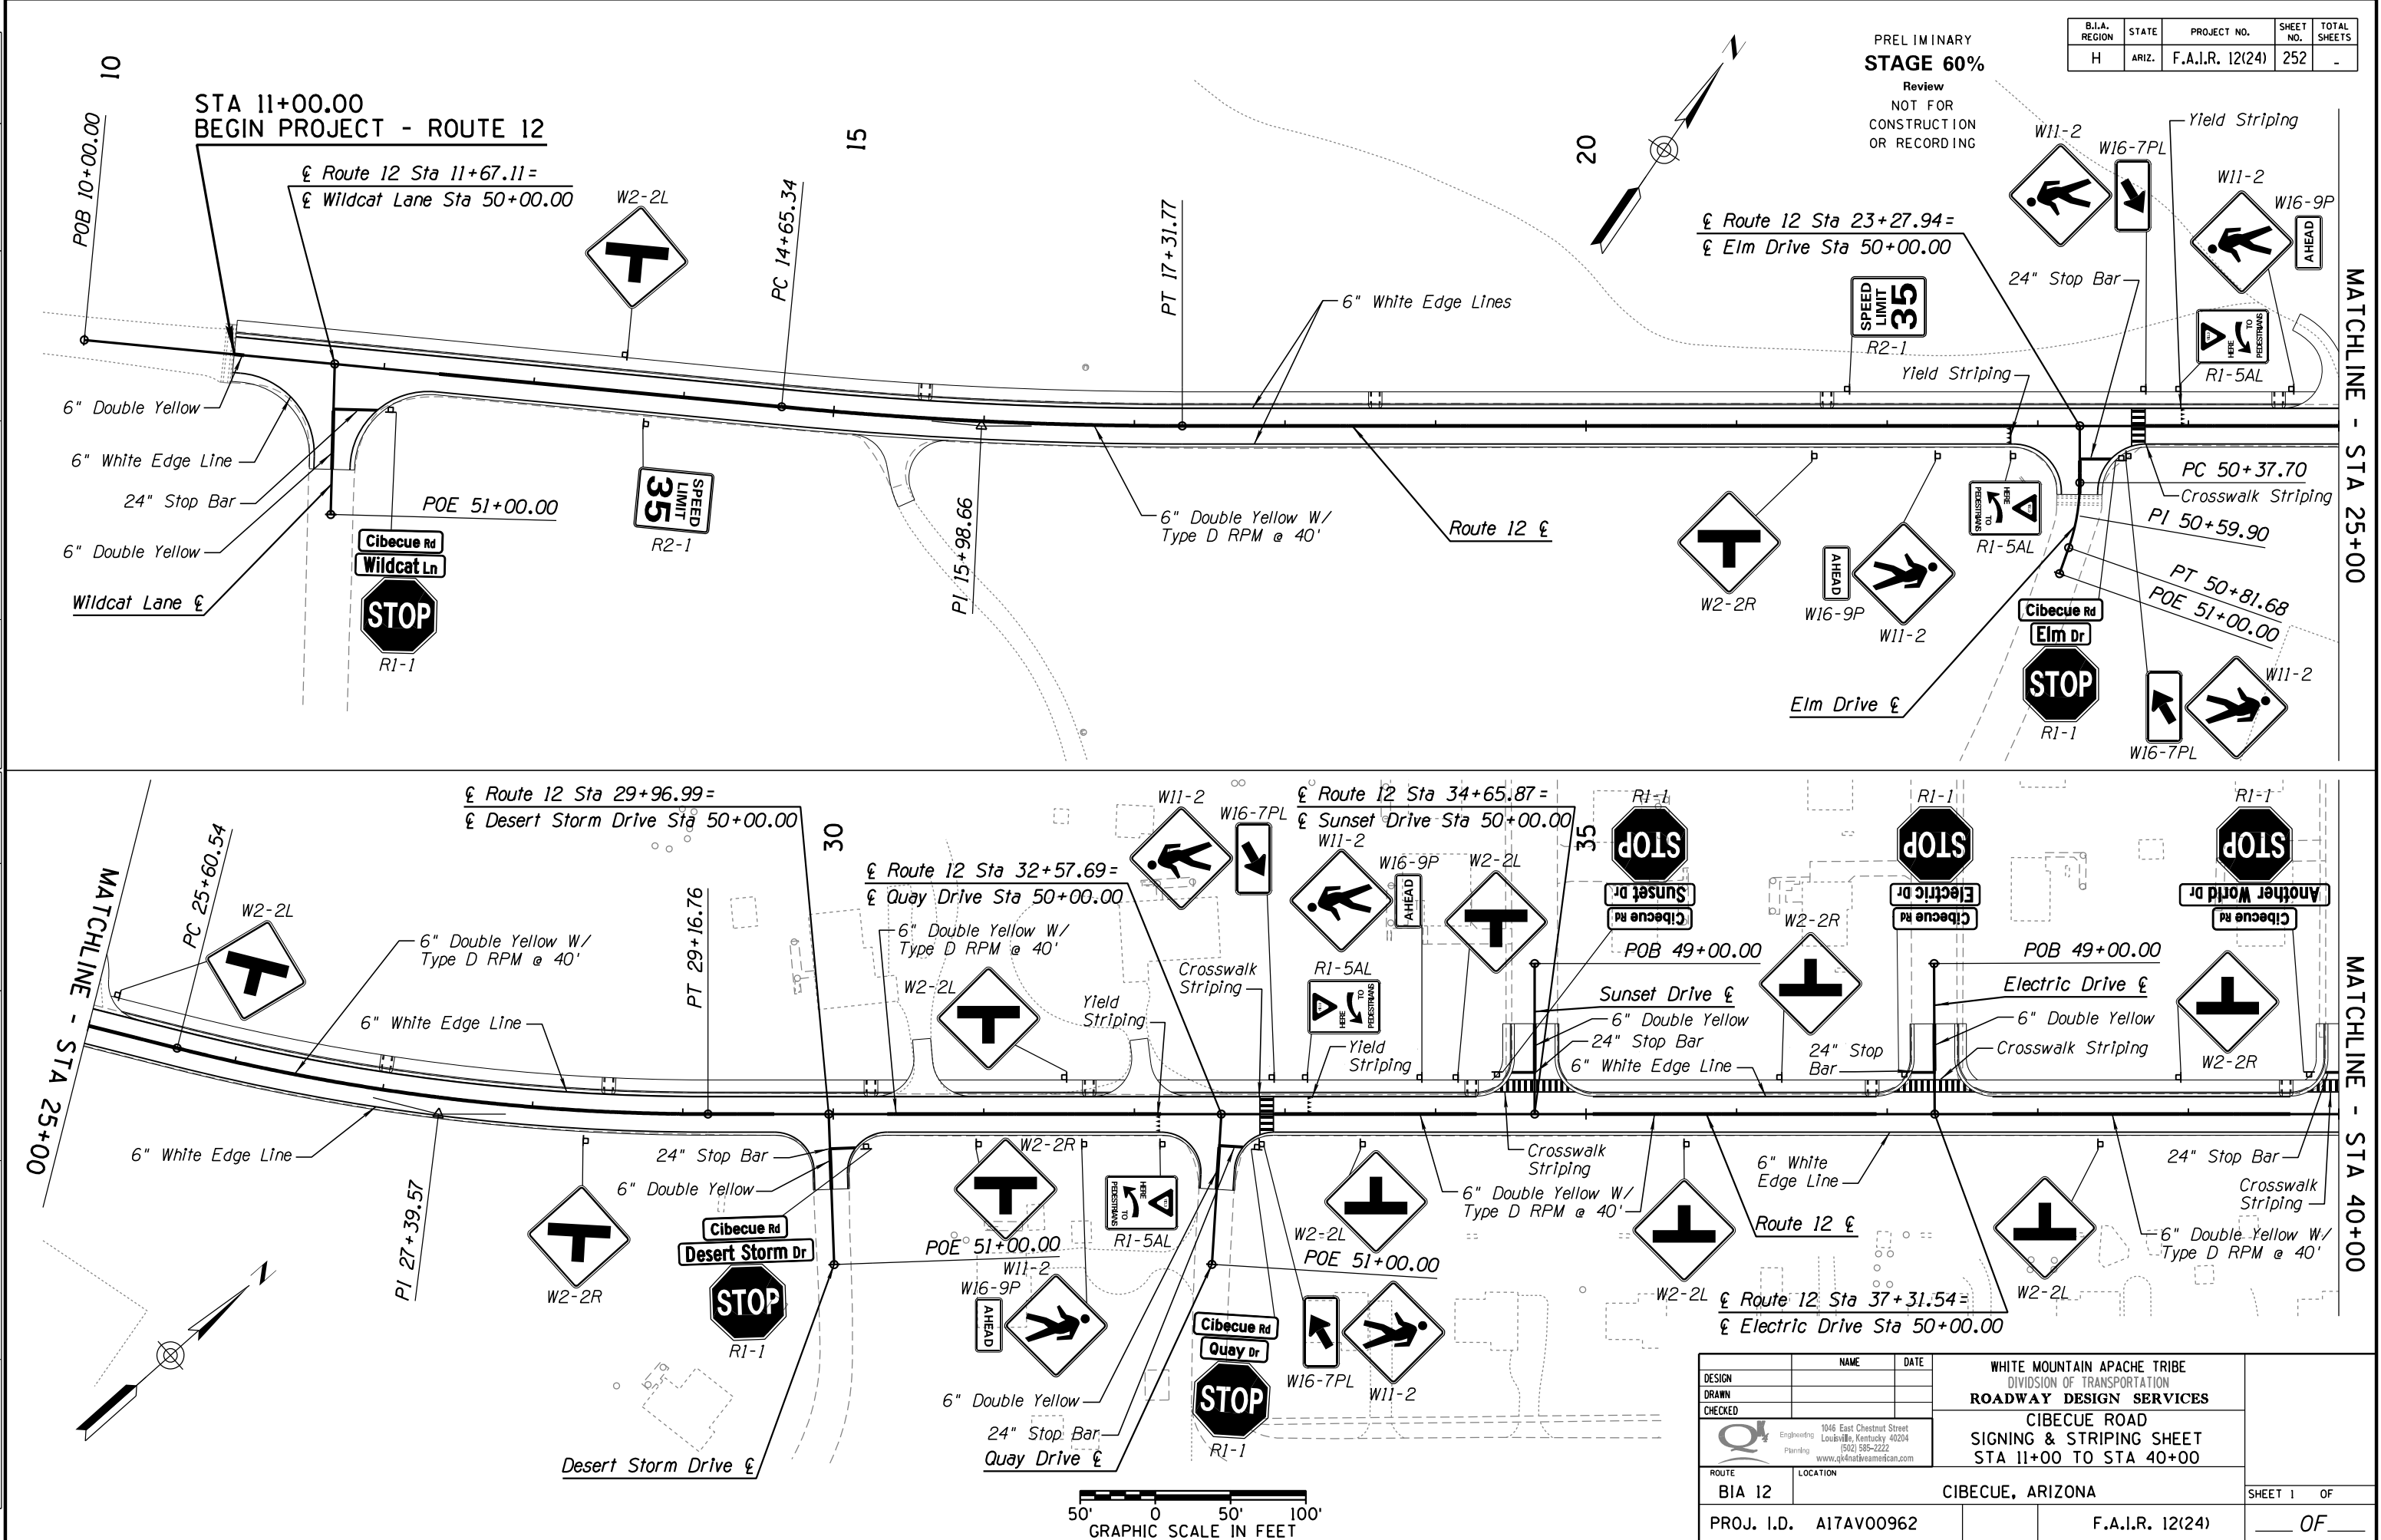

- All signs shall be in compliance with the Manual on Uniform Traffic Control Devices (MUTCD) 2009 Edition, Signing and Marking Standard Drawings, and the ADOT Traffic Engineering Manual of Approved Signs.
- The Contractor shall inventory all signs to be removed or covered and note damaged signs to the Engineer at the time of covering or removal. All signs damaged by covering or removal shall be replaced by the Contractor at the Contractor's expense.
- All existing signs to remain in current condition.

PART 2 - To be completed by ADOT & CONTRACTOR

http://www.azdot.gov/Inside_adot/OES/Water_Quality/Stormwater/Docs/swppp_construction_template.dot

PART 1 - To be completed by the Landscape Architect or Design Engineer

I. PROJECT DESCRIPTION

A. Owner Name and Address:
 Arizona Department of Transportation
 205 South 17th Avenue
 Phoenix, Arizona 85007-3213

B. Project TRACS Number: _____

C. Project Location: _____
 City: _____ County: _____
 Beginning Latitude (NAD 83): _____
 Beginning Longitude (NAD 83): _____
 Ending Latitude (NAD 83): _____
 Ending Longitude (NAD 83): _____
 To obtain the project latitude/longitude data, refer to the Flash Earth web link below (Bing Maps with labels): <http://www.flashearth.com/>

D. Project Description: _____

II. HYDROLOGIC INFORMATION

A. Project Size:
 Length (Mi.) _____
 Area (Ac.) _____

B. Area to be Graded (Ac.) * : _____
 * Blading of the shoulder build-up area is considered as grading and ground disturbance and should be covered by stormwater and/or other environmental regulations.

C. Percentage of the site that is impervious before and after construction:
 Percentage before Construction: _____
 Percentage after Construction: _____

D. Receiving Water(s), refer to the Arizona Department of Water Resources Web Link below (USGS Topo) : <https://glsweb.azwater.gov/WellRegistry/Default.aspx>

III. PRESERVATION OF EXISTING VEGETATION

A. In accordance with the specifications, existing vegetation will be preserved. Clearing limits shall be confined to areas that require grading. Existing vegetation outside the boundaries of the cleared area shall be protected from damage by construction activities. Existing trees within the area to be cleared shall be preserved and protected, wherever possible.

IV. SOIL STABILIZATION MEASURES

A. All disturbed soil, which will not be paved, riprapped or otherwise covered to prevent erosion, will be revegetated and/or landscaped in accordance with the project plans and specifications.

B. Scheduling of the revegetation effort can be found on PART 2 of this sheet under SCHEDULE OF MAJOR ACTIVITIES.

V. MEASURES TO CONTROL EROSION AND SEDIMENT

A. Temporary Erosion and Sediment Controls: (Refer to the Following SWPPP Site Plan and Specifications)

- _____ Erosion Control Mattings
- _____ Temporary Diversion Dikes
- _____ Check Dams
- _____ Rock Inlet/Outlet Protection
- _____ Sediment Control Berms
- _____ Silt Fences
- _____ Wattles (Excelsior/Straw)
- _____ Excelsior Logs / Sediment Logs
- _____ Seeding (Class II with mulch)
- _____ Others Describe: _____

B. Permanent Erosion and Sediment Controls and Post-construction Storm Water Management Measures: (Refer to SWPPP Site Plan and Specifications)

- _____ Crown Ditch/Dike
- _____ Rock Protection
- _____ Rock Riprap Channel Lining
- _____ Sediment Basin
- _____ Embankment Curb
- _____ Spillways and Downdrains
- _____ Minibenching
- _____ Seeding established as a perennial vegetative cover with a density of 70% of the native background vegetative cover.
- _____ Others Describe: _____

VI. MAINTENANCE AND INSPECTIONS

A. Frequency of Inspections:
 _____ At least once every 7 calendar days, OR
 _____ Every 14 calendar days and within 24 hours after a rainfall of 0.5 inches (12.7 mm) or more.

NOTE: RAINFALL GAUGE TO BE KEPT ON-SITE TO DETERMINE DEPTH OF RAINFALL

B. Inspection Procedure:
 ADOT's Contractor's Inspection Log and Compliance Evaluation Report (CER) will be completed by the contractor or his representative and will be kept on file for 3 years. A signed copy of the CER will be sent to the ADOT resident engineer. If repairs are necessary, they shall be initiated within 24 hours of the inspection report.

I. SCHEDULE OF MAJOR ACTIVITIES

A. Project Schedule: _____
 Start Date: _____
 End Date: _____

B. Construction Sequencing Schedule: (Attach Additional Sheets) Construction Activities _____

II. INVENTORY OF POLLUTANTS

A. The materials or substances checked below are expected to be onsite during construction:

- ___ Concrete
- ___ Paints
- ___ Herbicides
- ___ Fuel
- ___ Others, List: _____
- ___ Asphalt
- ___ Fertilizer
- ___ Wood
- ___ Oil

III. POLLUTION CONTROL MEASURES

A. Other Best Management Practices:

- ___ Wind Erosion and Dust Control
- ___ Solid Waste Management
- ___ Equipment Maintenance Procedures
- ___ Designated Washout Areas
- ___ Stabilized Construction Entrance
- ___ Protected Chemical and Material Storage Area
- ___ Other, Describe: _____

IV. SPILL PREVENTION AND RESPONSE

A. Spill Prevention:
 The procedures outlined in the Best Management Practices listed under Pollution Control Measures will be followed to prevent and contain spills of hazardous material. These preventative action include BMP's on equipment maintenance and proper handling, storage and disposal of chemicals and materials. All manufacturer's recommendations for usage, clean-up and disposal shall be followed.

B. Spill Response:
 In the event of any accidental spill of chemicals or hazardous materials, contact the ADOT Traffic Operations Center at 800-379-3701. If a reportable quantity is discharged into the storm water, ADOT shall contact the National Response Center and document the spill to the EPA. ADOT's Hazardous Materials Specialist shall provide instructions.

V. CERTIFICATION OF COMPLIANCE WITH FEDERAL, STATE AND LOCAL REGULATIONS

A. This Storm Water Pollution Prevention Plan (SWPPP) has been prepared in accordance with the latest updated version of ADOT's EROSION AND POLLUTION CONTROL MANUAL FOR HIGHWAY DESIGN AND CONSTRUCTION, published by ADOT Intermodal Transportation Division.

_____ SWPPP is in compliance with other Federal, State Laws, or Local Regulations.

VI. POLLUTION PREVENTION PLAN CERTIFICATION

A. I certify under penalty of law that I have personally examined and am familiar with the information submitted in this application and all attachments and that, based on my inquiry of those persons immediately responsible for obtaining the information contained in the application, I believe that the information is true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment. (Applies to VI. B., C., and D)

B. The operator/contractor as defined in AZPDES should sign the SWPPP in accordance with CGP Part VIII. J, and retain the SWPPP on-site at the construction site or other location easily accessible during normal business hours.

Signature: (operator/contractor) _____
 Date: _____
 Name: _____
 Title: _____
 Company: _____

C. ADOT Resident Engineer
 Signature: (owner) _____
 Date: _____
 Name: _____
 Title: _____
 ADOT District: _____

D. MUNICIPALITY for Municipal Separate Storm Sewer System (MS4)
 Signature: _____
 Date: _____
 Name: _____

 OR RECORDING

VII. OTHER REQUIREMENTS

A. A copy of the General Permit and NOI are attached in accordance to AZPDES General Permit for Storm Water Discharges From Construction Activities To The Water Of The United States.

B. Projects that are within 1/4 mile of impaired or unique waters require the SWPPP to be sent to ADEQ in combination with the NOI. Refer to the Arizona Outstanding, Impaired and Not-Attaining Waters *.PDF Maps by County web link: http://www.azdot.gov/Inside_adot/OES/Water_Quality/Stormwater/outstanding_unique_waters_maps_by_county.asp

C. For further requirements, check the ADEQ's Smart NOI Web Page: <https://az.gov/app/smartnoi/>

SEDIMENT LOG AT STORM DRAIN SECTION B-B (NTS)

TYPICAL OVERLAP PLAN (NTS)

NOTE:
Overlap applies to situations where ditch/channel is wider than length of single Sediment Log. Two or multiple Sediment Logs may be necessary.

NOTES:

- Sediment Logs shall not be installed in the urban freeway medians, nor where cable barrier systems are employed.
- Locate Sediment Logs as indicated in plans, SWPPP or as directed by the Engineer.
- Select, install and maintain Logs per manufacturers' specifications and good engineering practices.
- Lay Sediment Log across prepared roadside ditch or channel. Trenching or burial of Sediment Logs is not required. The close, continuous contact between the bottom of the Log and the ground is mandatory. The Logs shall be installed in the roadside ditch, swale or channel bottom perpendicular to the flow of water as shown on detail this sheet.
- Stake Log as shown. Stakes shall be placed through downstream side only as shown.
- DO NOT drive stakes through center of the Log. Stakes must be driven into the ground as shown.
- Ensure that no gaps exist between soil and bottom of Sediment Log. Repair any rills or undercuts promptly.
- Placement of Sediment Logs shall be evaluated by the Engineer in rocky soil conditions.
- Remove Sediment Log BMPs within the ditches/channels and around the storm drain inlets as per the direction of the Engineer or as soon as practicable upon stabilization of the construction disturbed area.
- Dispose of Sediment Logs and trapped sediment material and fill trench created by Sediment Log.
- The installation and maintenance of Sediment Log BMPs shall not negatively impact traffic safety, nor the designed function of roadway or bridge drainage facilities. Sediment Logs shall be installed and maintained to carry the stormwater of at least 2-year, 24-hour events.
- Make field adjustments and corrections of Sediment Log BMP immediately if it is causing flooding, erosion, and/or affecting roadway safety.
- Rock mulch/riprap may be required for channel/ditch lining or rock check dams for longitudinal ditch slopes that exceed 5% and/or for soil conditions not suitable for Log installation.
- The Sediment Log BMP's pay/bid item shall include all materials used for this BMP: all ground preparation, furnishing, installing, maintenance, final removal, and disposal, as well as returning the area to an acceptable condition as approved by the Engineer.
- Refer to Standard Specification Section 810-2.06(B) for Sediment Log material specifications.
- Make field adjustments and corrections to ensure NO sensitive biological resources (native species / habitats) will be adversely impacted.
- Construct Rock Wedge with angular-shaped Gradation C Rock Mulch as defined in Section 810-2.03 of the Standard Specifications and these special provisions. Natural river-run materials such as rounded river rocks/cobblestones and pebbles are NOT acceptable.

NOTES:

1. Rock Riprap/Rock Mulch shall be angular shaped, crushed rock materials. Natural river-run materials such as rounded river rocks/cobblestones and pebbles are NOT acceptable.
2. Rock Riprap/Rock Mulch within the traffic Clear Zone shall conform to the requirements of Section 810-2.03 Sieve Size Gradation A and/or Gradation C, and Section 913 of the Standard Specifications.
3. Embed rock within traffic recovery area/clear zone into the finished grade so that any portion of the rock above the grade will be less than 4" in height.
4. The installation and maintenance of Rock Protection BMPs shall not negatively impact traffic safety, nor the designed function of roadway or bridge drainage facilities. Rock Protection BMPs shall be installed and maintained to carry the stormwater of at least 2-year, 24-hour events.
5. Make field adjustments and corrections of Rock Protection BMP immediately if it is causing flooding, erosion, and/or affecting roadway safety.
6. The Rock Protection BMP's pay/bid item shall include all materials used for this BMP: all ground preparation, furnishing, installing, maintaining as well as returning the area to an acceptable condition as approved by the Engineer.
7. Make field adjustments and corrections to ensure NO sensitive biological resources (native species / habitats) will be adversely impacted.

6:1	40'

- * Notes:
- 1) Top Row Shall Not be Placed within 6'-0" of Edge of Pavement and 9'-0" from Outside Surface of Barrier.
 - 2) For erosive soils, place rows of wattles closer together.
 - 3) For soils with low erosive potential, place rows of wattles further apart.

Till and Roughen the Surface Prior to Wattle Installation

Slope Length Varies; Multiple Rows Shall be Spaced Out Parallel to Slope Contours

Toe of Slope
 Tamp Excavated Material, 2" Thick, Against Hill Side of Sediment Wattles to Prevent Undermining and No More Than 2" Thick

Rip 6"-12" with Furrows Left Parallel to New Slope Contours Created During Soil Tillage

6'-0" Minimum* from Edge of Pavement
 9" Dia. Wattle

Excavated Material To Be Tamped Against Upstream Side of Sediment Wattles To Prevent Undermining. The Thickness Should Be No More Than 2" To Avoid Dramatic Reduction Of The Sediment Loading Capacity.

** Note:
 Applicable only in the areas of concentrated flow - to include but not be limited to roadway sag spots and drop-off repair locations as per the direction of the Engineer.

NEW SHOULDER BUILDUP ** PROTECTION SECTION (NTS)

NOTES:

1. Install Sediment Wattles as slopes are constructed to grade or as directed by the Engineer. Select, install and maintain in conformance with manufacturers' specifications to meet site conditions for slope protection and in accordance with good engineering practices. No Sediment Wattles shall be installed in urban freeway medians, nor where cable barrier systems are employed.
2. Sediment Wattles shall be in continuous contact with trench bottom and sides. Do not overlap wattle ends on top of each other. A 20" Dia. wattle may be made from 2-3 rolled excelsior or straw blankets.
3. Butt adjoining wattles tightly against each other. Drive the first end stake of the second wattle at an angle toward the first wattle to help about them tightly.
4. Repair any rills or gullies promptly. Make field adjustments and corrections of Wattle BMP immediately if it is causing flooding, erosion, and/or affecting roadway safety.
5. Construction of cut slopes 2:1 and steeper in soil and rock materials that can be ripped shall be constructed, whenever possible, by Minibenches. Refer to Slope Minibenches BMP Detail.
6. Loosening surface soil is not required where Minibenches are used. For seeded areas, tillage shall be performed to form minor ridges and furrows parallel to new slope contours and as specified in Section 805 of the Standard Specifications and these special provisions.
7. Divert and direct run-on water from outside of the slopes to the spillways and/or rock riprap/rock mulch. Diversion dikes and/or ditches are necessary on natural undisturbed slopes beyond the top limits of new slopes to divert run-on water.
8. Installation and maintenance of Sediment Wattle BMPs shall not negatively impact traffic safety, nor the designed function of roadway or bridge drainage facilities.
9. Install and maintain Sediment Wattle BMPs to carry the stormwater of at least 2-year, 24-hour events.
10. The Sediment Wattle BMP's pay/bid item shall include all materials used for this BMP: all ground preparation, furnishing, installing, maintenance, final removal, and disposal of this temporary BMP, as well as returning the area to an acceptable condition as approved by the Engineer.
11. Refer to Standard Specification Section 810-2.06(C) for Sediment Wattle material specifications.
12. Make field adjustments and corrections to ensure NO sensitive biological resources (native species / habitats) will be adversely impacted.

NOTE:
 Construct bottom wattle above estimated bankfull level of roadside ditch, when the ditch is installed at toe of new slope.

Wattle at Toe of Slope to be 20" (Min) Dia. When Roadside Ditch Exists, Install Wattle Above Designated High Flow Line or Estimated Bankfull Level.

Silt Fence May Be Used in Place of Bottom Wattle as Described in Layout Plans and/or in Special Provisions

SECTION (NTS)

Stake Length:
 24" for 9" Dia. Wattle
 33" for 20" Dia. Wattle

SECTION B-B
 (Bolt Slots Not Shown)

BASE PLATE DETAIL

OR

DETAIL D

SECTION A-A

NOTES:

- All materials and construction shall conform to the requirements of the Arizona Department of Transportation Standard Specifications for Road and Bridge Construction.
- Poles shall comply with the requirements of the AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals, 6th Edition (2013), with 2015 Interim Revisions.
- See Std Dwg T-SL 4.28 for anchor bolt details.
- The foundation hole shall be augered and Class "S" (3,500 psi) concrete, poured against undisturbed compacted earth.
- Unstable soil and/or a steep slope may require a deeper foundation. See the Arizona Department of Arizona Standard Specifications.
- A 25 ft coil of #4 AWG bare copper conductor or a 14 inch square copper ground plate shall be installed before the concrete is poured and connected to pole grounding lug in the hand hole. The ground plate or coil shall be covered with 6 inches of fill.
- Pole may have a continuous taper or a step taper.
- Once the pole installation is completed, the open space between the base plate and foundation shall be grouted.
- If pole foundation is within or adjacent to sidewalk, top of pole foundation shall be flush with the abutting or adjacent sidewalk.
- Shop drawings shall be submitted to the Engineer for review prior to fabrication in accordance with the Standard Specifications.
- All dimensions not shown on the plans are dependent on the manufacturer's design, and shall be shown on the shop drawings.
- Signed and sealed shop drawings shall be submitted to the Engineer for review and approval prior to fabrication in accordance with the Standard Specifications, unless the manufacturer has been granted approval on the Department's most recently published Approved Product List (APL).
- All dimensions are nominal.
